Yathartha — Everyday Account and Posting Reference

Starter accounts verified against version 0.30.0-dev, 2 November 2026. This is a practical lookup for regular hospital/pharmacy bookkeeping. It is not a copy of your local Windows book: renamed/custom accounts can differ. The named journal preview shows the accounts in your actual book. Shared Patient A/C and generated revenue/project controls may use different codes if a code was already occupied.

1. Everyday accounts: choose the purpose first

Code	Account name	Use it for
1000	Cash	Actual physical cash received or paid
1010	Bank	Main bank; use the actual bank ledger if more than one exists
1100	Medicine inventory	Medicines purchased and held for later sale/use
1110	UPI settlement clearing	UPI collections not yet transferred to bank
1120	Card settlement clearing	Card collections not yet transferred to bank
1140	Other receipts clearing	Unresolved Other payment source; do not assume bank
1150	Patient A/C (starter shared control)	Separate patient billing/collection, not each patient's own account
2000	Trade payables	Vendor invoices owed and subsequently settled
2300	Patient/package advances	Unearned deposits pending delivery of services
4500	Medical consumables	Medical supplies/stock consumed in treatment or operations
4510	Doctor professional fees	Expense for doctors' professional services
4520	Employee benefits	Legacy broad benefits expense; use separate salary/PF setup for detailed new posting
4530	Rent	Hospital/office rental expense
4540	Utilities	Electricity, water and related utility expense
4550	Repairs and maintenance	Routine repair/maintenance expense, not a new capital asset
4560	Bank and payment processing charges	Bank/provider fees; account for fee GST separately where appropriate
4570	Depreciation	Book depreciation expense from the reviewed asset workflow
4580	Finance costs	Interest/finance expense, not loan principal repayment
4590	Administration	Genuine office/admin costs; not medicine purchases or a balancing plug
4600	Medicine cost of sales	Cost of medicines sold, not their selling price

Code	Account name	Use it for
4610	Income tax expense	Reviewed income-tax provision/expense, not GST or TDS withheld
1030	Medical equipment	Capitalised medical equipment
1040	Furniture and fixtures	Capitalised furniture/fixtures
1050	Accumulated depreciation	Cumulative depreciation credited by book asset journals
2400	Bank loans	Loan principal liability; keep interest separate
3000	Capital	Owner/share capital according to the reviewed entity setup
3100	Retained earnings	Prior accumulated results/closing transfers, not current sales

For your medicine vendor invoice, use 1100 Medicine inventory as the cost/asset debit, not 4590 Administration. Vendor liability is 2000 Trade payables. A separate Purchase ledger is not required for this inventory method. Eligible input GST, if applicable, is recorded separately; ineligible tax follows the reviewed inventory/cost treatment.

2. Regular transactions: which account to debit and credit

The entries below show the core accounts before any separately applicable GST/TDS, retention, discounts or other allocations. Use the dedicated tax/source modules when those apply. Do not post an expense again when settling an invoice already accrued.

Transaction	Debit	Credit	Screen / important check
Receive vendor invoice for medicines kept in stock	1100 Medicine inventory	2000 Trade payables	AP Vendor Invoices; taxed source first through GST as appropriate, then link once
Pay that medicine/vendor invoice	2000 Trade payables	1010 Bank or 1000 Cash	AP → select invoice → Mark selected invoices paid; actual payment date/amount
Sell medicines and collect immediately	Actual collection: 1000/1010/1110/1120	4030 Pharmacy sales	Sales receipt/import for supported earned receipts; appropriate GST workflow for taxable splits
Recognise cost of medicines sold	4600 Medicine cost of sales	1100 Medicine inventory	Reviewed journal from stock/dispensing records at COST, not sale value
Issue stocked medicines/supplies for treatment consumption	4500 Medical consumables	1100 Medicine inventory	Reviewed journal at issued stock cost; do not also expense the same stock through 4600
Receive rent invoice, not yet paid	4530 Rent	2000 Trade payables	AP; separately review GST/TDS applicability
Receive electricity/water invoice	4540 Utilities	2000 Trade payables	AP, then settle payable on payment
Receive routine repairs invoice	4550 Repairs and maintenance	2000 Trade payables	AP; distinguish repair from capital addition

Transaction	Debit	Credit	Screen / important check
Receive doctor professional-service invoice	4510 Doctor professional fees	2000 Trade payables, with separate withholding control if applicable	TDS/source workflow where required; AP registers only net vendor payable
Pay salary immediately, not previously accrued	Configured Salaries and wages expense	1010 Bank	Journal; split actual deductions/liabilities where applicable. If accrued earlier, settle the salary-payable ledger instead, not expense again
Bank fee already debited by bank, not previously recorded	4560 Bank and payment processing charges	1010 Bank	Reviewed bank adjustment/journal; separately review fee tax
Routine office/admin vendor bill	4590 Administration	2000 Trade payables	AP; use only for genuine administration
Buy medical equipment on credit	1030 Medical equipment	2000 Trade payables	Reviewed accrual/AP; register/link asset once in Assets & depreciation
Buy furniture on credit	1040 Furniture and fixtures	2000 Trade payables	Reviewed accrual/AP; apply asset review, not duplicate purchase entry
Post book depreciation	4570 Depreciation	1050 Accumulated depreciation, or configured asset control	Assets & depreciation; do not duplicate its posted depreciation manually
Receive bank loan principal	1010 Bank	2400 Bank loans	Reviewed journal; loan is not sales income
Repay bank loan principal	2400 Bank loans	1010 Bank	Reviewed journal; principal is not expense
Pay loan interest not already accrued	4580 Finance costs	1010 Bank	Reviewed journal; settle interest payable instead if already accrued
Collect an unearned package advance	Actual cash/bank/clearing account	2300 Patient/package advances	Service revenue → Advance; not earned sales yet
Earn an existing advance	2300 Patient/package advances	Correct service revenue account	Service revenue → Earn advance; original tax/source controls retained
Raise a separate unpaid patient bill	Shared Patient A/C (starter 1150)	Correct service revenue account	Service revenue → Bill
Collect that previously raised bill	Actual cash/bank/clearing account	Shared Patient A/C (starter 1150)	Service revenue → Collect bill; do not credit revenue a second time
UPI provider transfers collections into bank, no fees	1010 Bank	1110 UPI settlement clearing	Bank reconciliation → Review UPI/card/cash settlement; not another sale
Card provider transfers collections into bank, no fees	1010 Bank	1120 Card settlement clearing	Same settlement workflow; review real provider fees separately
Deposit physical cash into bank	1010 Bank	1000 Cash	Cash deposit/transfer; no income or expense
Withdraw bank money for physical cash	1000 Cash	1010 Bank	Transfer/journal; no expense merely because money left bank

Inventory warning: a sales receipt records revenue and collection. It does not by itself establish medicine quantity, purchase cost or the cost of stock sold/consumed. Use actual stock records and a reviewed cost journal; do not subtract the customer selling price from 1100. This tool's current inventory ledger is not a full batch/expiry/quantity stock system.

Worked example: medicine invoice INR 11,923 with no separate tax allocation is Dr 1100 / Cr 2000 for 11,923. Full later bank payment is Dr 2000 / Cr 1010 for 11,923. The payment does not debit inventory or administration again. If medicines costing 2,000 are later sold for 3,000 without a separate tax split, the collection/sale credits 4030 for 3,000 and the separate cost journal is Dr 4600 / Cr 1100 for 2,000. The medicine margin in that example is 1,000 before other expenses.

3. Sales categories: which revenue account to credit

For earned receipts, debit the ACTUAL collection account: 1000 Cash, 1010 actual main-bank receipt, 1110 UPI clearing or 1120 Card clearing. Split across accounts when the receipt has mixed payment methods. Other source stays in its configured clearing account (starter 1140) until identified. Credit the appropriate category below; the imported standard table resolves these through the book's saved service mappings.

Code	Revenue account / source category
4000	OPD consultation revenue
4010	Therapy / Treatment revenue
4020	IPD room revenue / Roomrent
4030	Pharmacy sales / Medicine Retail
4050	Eye check-up revenue
4060	Registration revenue
4070	Treatment medicine revenue / Medicine Treatment
4080	Consumables revenue charged to patients
4090	Nursing charges revenue
4100	Duty doctor charges revenue
4110	Patient food revenue charged to patients
4120	Swarnaprashna revenue
4130	Kalari revenue
4140	Treatment receipts — earned services / Trtmt Pymt RECD
4150	Miscellaneous patient charges revenue
4040	Resort service revenue (separate resort category)

Do not confuse 4080 Consumables REVENUE with 4500 Medical consumables EXPENSE. The legacy source heading Food expenses maps to patient food REVENUE 4110 when it is a patient charge; the hospital's own kitchen costs require an appropriate expense ledger, not a debit to 4110. Likewise, doctor fees charged to a patient (4100) are different from doctor fees paid by the hospital (4510). An advance is 2300, not 4140 simply because the source says treatment payment.

4. Tax, project and control accounts: use the reviewed workflow

Code	Account	Use / safeguard
1200 / 1210 / 1220	Input CGST / SGST / IGST	Purchase input tax only after reviewed applicability/eligibility; not every tax amount is available ITC
2200 / 2210 / 2220	Output CGST / SGST / IGST	Tax on taxable sales according to the actual source and reviewed rule
2100 / 2110 / 2120	TDS payable — 194J / 194C / 194I	Starter controls only; use the accountant-reviewed section/rule, not an assumed section from the name
2010	Contractor retention	Amount withheld for later contractual release; actual project may use its configured control
1020	Vaikom resort CWIP (starter aggregate)	Use CWIP module's actual project/category ledgers for project costs; do not default every cost to this aggregate
1130	Inter-branch clearing	Genuine cross-unit funding/charges; each unit must balance and entity clearing must reconcile

Tax/control ledgers can be created or mapped by their modules, so use their configured accounts and source previews rather than overwriting an existing control. No GST/TDS rate, legal applicability or ITC entitlement is implied by this list. Salary accruals need a dedicated reviewed salary-payable liability if used; that is not supplied as a fixed starter code here, and employee payroll should not be disguised as a vendor invoice.

Daily check before approving: correct unit; actual accounting date; invoice/reference; correct account NAME beside the code; balanced debit/credit; tax/source reviewed; no duplicate accrual/payment. Payments settle the balance already recorded; transfers are not income/expense; stock issues use cost. If the preview account name does not match this reference because your master was customised, stop and use the actual reviewed mapping.

Separate salary and PF ledgers

Use Chart of accounts → Set up salary & PF ledgers. Preferred free codes:4521 Salaries and wages;4522 Employer PF contributions;2310 Salaries payable;2311 Employee PF deductions payable;2312 Employer PF contributions payable. Actual codes come from the reviewed setup preview; occupied client codes are never replaced. Employee PF is deducted from gross salary into a liability, not expensed again. Employer PF is a separate expense/liability. Salary/PF bank payments clear those liabilities after accrual. Use the dedicated Salary and PF Guide for compound examples, reporting mappings and historical4520 review. Setup creates no journal.
